

BRIDGE DESIGN

We understand the importance of providing the public with a safe and economical solution that improves mobility and enhances quality of life.

ABOUT OUR SERVICES

Popli Design Group (PDG) has been providing bridge design services for over 25 years. Our team of engineers have completed numerous bridge projects, ranging from minor rehabilitations to major replacements. PDG's bridge replacement design experience includes steel multi-girder, pre-stressed concrete multi-beam, timber multi-girder, and precast concrete three-sided structures. Our bridge rehabilitation experience includes those same structure types as well as steel through-truss and through-girder bridges. Our team of engineers have experience working with local governments and major state transportation agencies.

At PDG, we use a team approach to efficiently plan, progress, and complete projects. Our team works closely with clients to formulate a concise and realistic project schedule from preliminary design through final design. We work with our clients and the community to make every project a success that all of us can be proud of.

Bridge Design Services:

- Bridge Replacement
- Bridge Rehabilitations
- Retaining Walls
- Railroad Bridges
- Hydrology and Hydraulics
- Scour Analysis
- Inspections
- Load Ratings
- Erection and Construction Engineering
