

STRUCTURAL ENGINEERING

Popli Design Group's (PDG's) structural engineers are...*different*...in a good way.

ABOUT OUR SERVICES

Our philosophy revolves around a team-based approach rooted in honesty, integrity, commitment, and accountability. We partner with owners, consultant, and construction teams to execute well-thought, cost-conscious designs that deliver on the needs and interests of our clients.

We are passionate about what we do and have fun doing it. Our engineers thrive on challenges and get excited about the "nuts and bolts". With involvement during initial planning and evaluation phases, our team provides information that is essential to early decision making, thereby guiding project development in the best interest of all parties.

Our portfolio includes not only buildings, but structures of various types, sizes, and levels of complexity for educational, institutional, healthcare, commercial, industrial, and municipal projects. We provide continuous support from conception to completion, offering our consulting expertise in the following areas:

- New construction and additions
- Renovations and preservation
- Structural repair and strengthening
- Alternate structural systems and materials
- Speciality structures
- Envelopes and facades
- Structural waterproofing
- Equipment supports and bracing
- Peer reviews
- Structural investigations and evaluations
- Condition assessments
- Feasibility studies

PDG's talented professionals understand buildings – their behavior and interaction with building systems, how they affect occupants and impact the environment. Our knowledge of building codes and standards, building materials, and the construction process allows us to provide innovative, constructible, and economical structural solutions for the most complicated projects.
