

BRIDGE INSPECTION

When performing field inspections, the safety of both the public and the inspection crew is of prime concern.

ABOUT OUR SERVICES

Popli Design Group (PDG) has been providing bridge inspections since 1988, and has been doing so as a Prime consultant since 1998. As a Prime, PDG has inspected over 12,500 bridges and over 2,900 culverts, ranging from small precast concrete structures and pipe culverts to multi-span pedestrian bridges to complex suspension bridges, long-span arch bridges, and interstate bridges. Our clients include NYSDOT, NYSTA, NYPA as well as other transportation authorities and municipalities throughout New York State.

PDG has received very high ratings and performance recommendations with repeat designations from the NYSDOT bridge inspection management team. We have concentrated on building a dedicated group of inspectors who are making condition inspection their career. The size of our group provides us the capacity to add projects and take on additional inspections within contracts when requested by the client without our staff being overloaded. Our staff is very familiar with AASHTO Elements, BDIS, Virtis, and NYS bridge inspection processes and procedures.
